

THE KEY POLICIES AND INITIATIVES OF INDONESIA BLUE ECONOMY

Rima Prama Artha
Danareksa Research Institute

CURRENT REGULATION ON BLUE ECONOMY IN INDONESIA

Regulations to Support the Ocean Economy Concept

Regulation to Support Implementation of Business Process in Maritime and Fisheries Sector (job creation, Exclusive Economic Zone (ZEE), conservation of fish resources stocks, Business Process in the Maritime and Fisheries Sector)

Regulation for Ocean Spatial Planning (Ocean Protection and Waste Management)

Regulation to Support Implementation of Sea Transportation (Shipping, Rights and Responsibilities of Foreign Ships and Aircraft and Implementation of Shipping Sector)

Regulation to Protect Energy and Mineral Resources as well as Non-Conventional Natural Resources based on Blue Economy (the Implementation of Energy Resources and Mineral Resource Sector)

Regulation to Manage Sea Construction, Sea Industrial, and Biotechnology (Spatial Planning, Water Resources, Business Process in the Maritime and Fisheries Sector)

Regulation to Support Sea Usage for marine Tourism and Business Activities in Coastal Area and Isles

BLUE ECONOMY ROADMAP

Focus 1: Increasing the Area of Marine Protected Areas

Focus 2: Quota-Based Measurable Catchment

Focus 3: Development of Sustainable Marine, Coastal and Land Aquaculture

Focus 4: Management of Coastal Areas and Small Islands

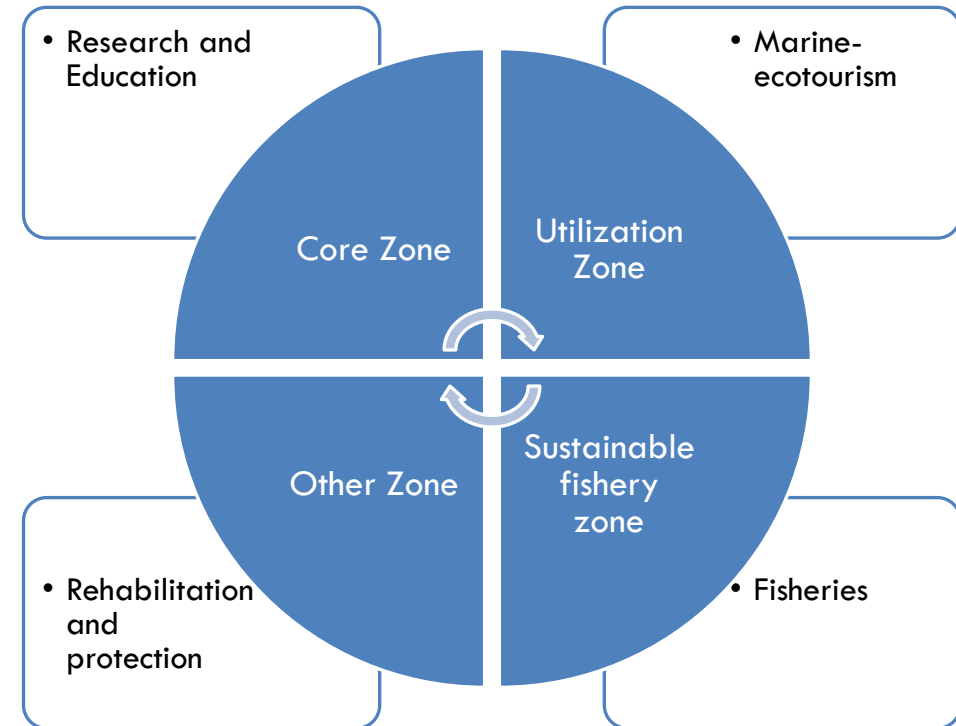

Focus 5: Management of Plastic Waste in the Ocean

MARINE PROTECTED AREA

To achieve SDG 14, Indonesia has committed to allocate 10 percent of its territorial waters or 32,5 million hectares as marine protected areas in 2030.

- Around 28,4 million hectare of marine protected area has been established
- 9,9 million hectares managed by the central government and 18,5 million hectares managed by the provincial government

MEASURED AND QUOTA-BASED FISH CATCHMENT POLICY

Supported by tech surveillance systems and the development of fisheries cultivation villages.

Three types of quota:

- Fishing Industry
- Local Fisheries
- Non-commercial Activities

NATIONAL ACTION PLAN FOR THE MANAGEMENT OF MARINE PLASTIC DEBRIS

The key important aspects

1. Coordination between institutions responsible for waste management.
2. Application of technology to control plastic debris, including the application of science-based management
3. The significant importance of societal efforts to reduce, recycle and reuse plastic debris to be advanced since early age.

Five main pillars

1. Improving Behavioral Change
2. Reducing Sea-Based Leakage
3. Reducing Land-Based Leakage
4. Reducing Plastics Production and Use
5. Enhancing Funding Mechanisms, Policy Reform and Law Enforcement

Strategies

1. The action plan at the local governments level
2. The action plan at the national governments level
3. The action plan at the international level
4. The plan of action for industrial
5. These plan of action also take account Research and Development, Campaign and Waste Bank

The final goal is reducing marine plastic debris by 70 % in 2025

BLUE FINANCE POTENTIAL

The document presents a strategy for mobilizing investments in key sectors of the blue economy while prioritizing the principles of sustainable development.

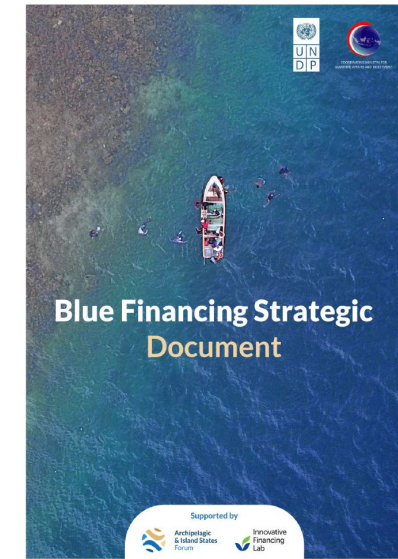

Table 4. The relevance assessment matrix of the Blue Economic Sectors

Relevance Assessment Score	Grading
10 - 12	 Navy Blue (High Relevance)
7 - 9	 Sapphire Blue (Moderate Relevance)
4 - 6	 Sky Blue (Modest Relevance)

Table 6. Average Total Investment Needed per Year (IDR Trillion)

Blue Economy Targeted Contribution to GDP	7%	12.45%
No Depletion	3.64	1,928.90
1.5% Depletion	788.35	2,708.51
3% Depletion	1,392.22	3,307.21
